Experiment 1

Student Name: Khushi Khemka   **UID:** 23BCS10652

Branch: BE-CSE   **Section/Group:** Krg_3A

Semester: 6th   **Date of Performance:** 12/01/26

Subject Name: Full Stack   **Subject Code:** 23CSH-309

1. **Aim:** To design and implement the foundational frontend architecture of the EcoTrack application using modern React practices, vite tooling and ES6+ JS features.

2. **Objective:**

   - To set up a modern React project using Vite for efficient development

   - To design a clean and scalable frontend architecture using React best practices

   - To implement reusable and modular components for the EcoTrack application

   - To apply ES6+ JavaScript features for efficient and maintainable code

   - To establish a strong frontend foundation for future enhancements and integrations
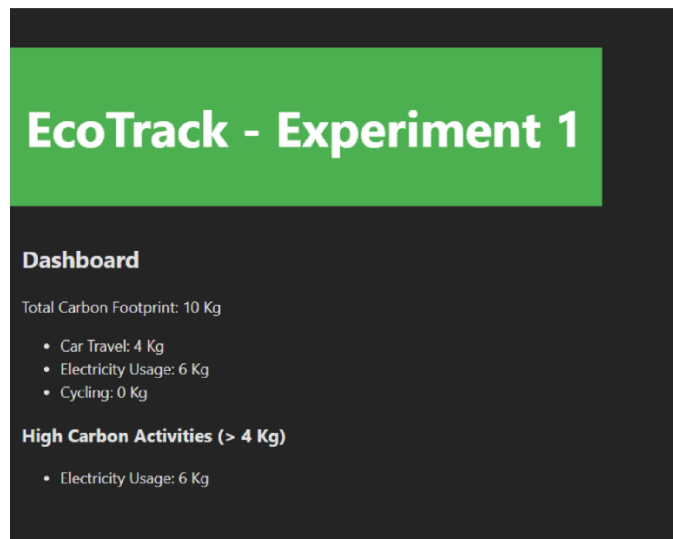

3. **Code:**

   - Logs.js

```
export const logs = [
  { id: 1, activity: "Car Travel", carbon: 4 },
  { id: 2, activity: "Electricity Usage", carbon: 6 },
  { id: 3, activity: "Cycling", carbon: 0 },
];
```

   - dashboard.jsx

```
import { logs } from "../data/logs";
```

```jsx
const Dashboard = () => {
  const totalCarbon = logs.reduce((sum, log) => sum + log.carbon, 0);

  return (
    <div>
      <h2>Dashboard</h2>
      <p>Total Carbon Footprint: {totalCarbon} Kg</p>

      <ul>
        {logs.map((log) => (
          <li key={log.id}>
            {log.activity} = {log.carbon} kg
          </li>
        ))}
      </ul>
    </div>
  );
};

export default Dashboard;
```

4) Output:

5)Learning Outcomes:

- Understand how to create and configure a React application using Vite tooling
- Gain proficiency in applying modern React concepts and best practices
- Develop the ability to build reusable and modular frontend components
- Learn to use ES6+ JavaScript features effectively in real-world applications
- Acquire skills to design a scalable and maintainable frontend architecture
